

# UConn IEEE PELS & PES Chapter

Presents an invited talk on

## **Clean Energy Innovation and the Role of Technology Commercialization**

Abstract: The role of clean energy in the energy industry has rapidly accelerated in the early 2000's and with the passing of the Inflation Reduction Act in 2022, bigger changes are now happening even faster. This presentation will explore the development of the "climate tech" landscape that we know today, the role of technology commercialization, and the future of emerging technologies such as green hydrogen, electric vehicles and energy storage.
